NA/Initial miner of animalific annimal and	Links minorana	1 1		1			
Which piece of scientific equipment can be used to observe cells?	Light microscope						
Name the labelled parts in the diagram	A – eyepiece lens						
below:	B – coarse focussing wheel						
	C – fine focussing wheel						
a //	D – mirror/light						
	E – objective lens						
A	F – stage						
	G – slide						
b C f							
g g							
đ							
	<u> </u>						
What are the two key differences	Electron microscope has:						
between a light microscope and an	Higher magnification (more zoom)						
electron microscope	Higher resolution (more detail) The appell are threatened unit in any	+	+	-	-		
What is a cell?	The smallest structural unit in an						
What is a tissue?	organism						
	Cells of the same type joined together						-
Give two examples of tissue types in humans.	Muscle Taith slip! (to a lover of skip)						
numans.	Epithelial (top layer of skin)Connective						
What is an organ?	 Nervous Tissues of different types joined together 						+
Give five examples of organs in humans.	Heart						
Give five examples of organs in numaris.	• Lungs						
	Kidneys						
	• Liver						
	Brain						
	• Stomach						
	• Intestines						
Give two examples of organs in plants.	Leaves						
Give two examples of organs in plants.	• Stem						
	• Root						
	• Flower						
What is an organ system?	A number of organs working together						
Give two examples of organ systems in	Digestive system						
humans.	Gas exchange system						
	Circulatory system						
	Nervous system						
Give two examples of organ systems in	• Shoots		\top				
flowering plants.	• Roots						
Name the four organelles in an animal	Nucleus		\top				
cell.	Cytoplasm						
	Mitochondria						
	Cell membrane						

Name the seven organelles in a plant cell.	NucleusCytoplasmMitochondria				
	Cell membraneCell wall				
	Vacuole				
	Chloroplasts				
What is the role of the nucleus?	Contains genes which control the				
	production of proteins in the cell.				
What are genes made of?	DNA				
What is the role of the cytoplasm?	It is a jelly-like substance in which most of the chemical reactions take place.				
What is the role of the mitochondria?	It is where aerobic respiration takes place.				
What is the role of the cell membrane?	It controls which substances enter and leave the cell.				
What is the role of the cell wall?	It provides structure for the cell.				
What is the role of the vacuole?	It stores cell sap.				
What is the role of the chloroplasts?	It is where photosynthesis takes place.				
What is the role of a stain (e.g. methylene	Highlighting certain organelles (e.g.				
blue or iodine solution)?	nucleus) when cells are viewed under a				
	microscope				
Which stain is used for cheek cells?	Methylene blue				
Which stain is commonly used for plant cells?	lodine solution				
What is the definition of diffusion?	The movement of particles from an area of higher concentration to an area of lower concentration.				
Describe how oxygen moves from the air into cells.	Oxygen is inhaled and enters the lungs. It diffuses out of the lungs into the bloodstream. It is carried around the body in the blood. It diffuses out of the blood into cells.				
Describe how carbon dioxide moves from cells into the air	Carbon dioxide diffuses out of cells into the bloodstream. It is carried back to the lungs in the blood. It diffuses out of the blood into the lungs. It is exhaled from the lungs.				
Describe how glucose moves from the small intestines into cells.	Glucose diffuses out of the small intestines (through the villi) into the bloodstream. It is carried around the body in the blood. It diffuses out of the blood into cells.				
How are the lungs adapted to allow fast diffusion of gases?	 Alveoli increase the surface area Alveoli have a wall one cell thick (decreases the diffusion distance) Good blood supply (maintains the concentration gradient) 				

How are the small intestines adapted to allow fast diffusion of nutrients?	 Villi increase the surface area Villi have a wall one cell thick (decreases the diffusion distance) Good blood supply maintains the concentration gradient 				
How are gases exchanged in leaves?	The stomata open and close allowing gases to enter and leave				
How are amoeba adapted to feed and move?	They have pseudopods which extend, allowing the amoeba to engulf its prey.				
How are euglena adapted to feed?	They have chloroplasts which allow them to photosynthesise. They also contain an eyespot to allow them to detect light.				
How are euglena adapted to move?	They have a flagellum (tail).				
How are paramecium adapted to feed?	They have cilia on the outside which wave to waft single-celled organisms into their oral groove (mouth).				

	T	1			1	- 1	-	
In which organ does gas exchange	The lungs							
happen most frequently?								
What is the term used to describe the	Inspiration							
intake of gases?								
What is the term used to describe the	Expiration							
outflow of gases?								
What is the trachea?	The tube connecting the mouth/nose to							
	the lungs							
What are the alveoli?	The air sacks which increase the surface							
	area of the lungs.							
What is the diaphragm?	A dome-shaped muscle found below the							
	lungs.							
Identify each labelled part of the diagram	A – trachea							
below:	B – alveoli							
	C – bronchioles							
	D – bronchi							
	E – ribs							
a	F – intercostal muscles							
b	G – diaphragm							
A TELL								
C								
d								
98								
e								
f g								
What is the effect of the diaphragm	The pressure in the chest is reduced and							
contracting (moving down)?	therefore air is drawn into the lungs.							
		1		l.		1_		

What is the effect of the diaphragm	The pressure in the chest is increased and				
relaxing (moving up)?	therefore air is forced out of the lungs.				
What is the role of the rib cage?	To protect the lungs and other organs in				
	the chest.				
What is the role of the intercostal	They allow the volume of the chest to				
muscles?	increase, providing more space for the				
	lungs to expand.				
What is tidal volume a measure of?	The volume of air breathed in and out				
	with each normal breath				
What is vital capacity a measure of?	The maximum volume of air that can be				
	breathed in and out with the deepest				
	breath a patient can manage.				
How could lung volume be measured?	By exhaling air through a tube into an				
	unturned bottle filled with water. The				
	volume of water displaced can then be				
	measured.				
How does asthma affect the gas	Asthma causes the trachea to get				
exchange system?	narrower, meaning that it is harder to				
	inhale air.				
How does an inhaler help in treating	An inhaler causes the lining of the				
asthma	trachea to relax, widening the passage.				
Name 3 impacts of smoking on the gas	Lung cancer				
exchange system.	Heart disease				
	Reduced lung surface area	Ш			
What are the names of the blood vessels	Arteries				
which carry blood away from the heart?		Ш			
What are the names of the blood vessels	Veins				
which carry blood towards the heart?		Ш			
How are red blood cells adapted to	No nucleus – more space from				
carrying oxygen?	carrying oxygen				
	Biconcave shape – provides a larger				
What is the function of the red blood	surface area	$\vdash\vdash$			
cells?	To carry oxygen around the body				
What is the function of the white blood	To fight dispasses	\vdash			
cells?	To fight diseases				
CEIIS!					

What is the word equation for aerobic	Clusosa Lawran - Water Learbon	ТТ	1		<u> </u>		
What is the word equation for aerobic respiration?	Glucose + oxygen → water + carbon dioxide						
In which part of the cell does aerobic	Mitochondria	++					
respiration take place?	Mitocrionaria						
What is the purpose of respiration?	The release of energy from glucose						
What is the difference between breathing	Breathing is the inspiration and						
and respiration?	expiration of gases (using the lungs)						
	Respiration is a chemical reaction						
	involving glucose and oxygen						
By what process to gases move between	Diffusion						
the lungs and the blood?							
How are the lungs adapted for gas	Alveoli increase the surface area						
exchange?	A good blood supply maintains the						
	concentration gradient						
	Alveoli have walls one cell thick –						
	smaller diffusion distance						
	A moist layer allows gases to dissolve	$\perp \perp$					
How can we test for carbon dioxide?	Bubbling the gas through limewater. It						
	will turn from colourless to cloudy white						
	if carbon dioxide is present.	$\perp \perp \downarrow$					
How will the composition of exhaled air	Inhaled air will contain more oxygen						
compare to the composition of inhaled	(~20%) and less carbon dioxide (~0.06%)						
air?		$\perp \perp \downarrow$					
What is difference between aerobic and	Anaerobic respiration does not require						
anaerobic respiration?	oxygen.	$\perp \perp \downarrow$					
What is the equation for anaerobic	Glucose → lactic acid						
respiration in animals (including							
humans)?		$\perp \perp \downarrow$					
Does anaerobic respiration release more	Much less						
of less energy than aerobic respiration?		$\perp \perp \downarrow$					
What is the issue with producing lactic	It is a mild poison which causes cramp in						
acid?	the muscles.	$\perp \perp$					
What is the effect of exercise on	More exercise = higher breathing rate						
breathing rate?							
e di la la compania de la compania del compania del compania de la compania del compania de la compania del la compania del compania de	Il in a second by a second of a second	++					
Explain why your breathing rate increases	It increases the amount of oxygen						
during exercise.	reaching your lungs and the amount of						
	carbon dioxide being removed from your						
What is the effect of exercise on heart	lungs.	++		-		-	
	More exercise = higher heart rate						
rate?	More ovugen and glucose resist he	++		-		+	+
Explain why your heart rate increases	More oxygen and glucose must be						
during exercise.	delivered to cells to allow respiration to						
	happen more quickly, releasing more						
Evaloin why one suchia rescitation is	energy.	\dashv		-		+	+
Explain why anaerobic respiration is	You cannot transport oxygen quickly						
necessary during hard exercise?	enough to your cells.	$\perp \perp \downarrow$					

Biology – cellular respiration

Why do we continue to breathe fast and	To transport oxygen to our cells to break				
have a high heart rate after exercise?	down lactic acid (oxygen debt).				
What is the word equation for the	Oxygen + lactic acid → water + carbon				
breakdown of lactic acid?	dioxide				
What is the equation for anaerobic	Glucose → carbon dioxide + ethanol				
respiration in plants and yeast?					
What is yeast used for?	Baking (production of carbon dioxide				
	causes the bread to rise)				
	Brewing beer (production of ethanol				
	makes the beer alcoholic)				

		1 1			- 1	 -
What is the word equation for photosynthesis?	Carbon dioxide + water → glucose + oxygen					
What is also required for photosynthesis	Light					
to take place?						
In which part of a plant does	The leaves					
photosynthesis take place?						
In which part of a plant cell does	Chloroplast					
photosynthesis take place?						
What is the name of the substance inside	Chlorophyll					
the chloroplast which allows						
photosynthesis to take place?						
What three things happens to the glucose	It is converted to starch for storage					
after it has been made?	It is used in respiration					
	It is used for growth to become cell					
	walls, seeds or fruits					
Which four factors may affect the rate of	Light intensity					
photosynthesis?	Concentration of carbon dioxide					
	Temperature					
	Volume of water (although this is less					
	important)					
What is the effect of increasing the light	It will increase					
intensity on the rate of photosynthesis?						
What is the effect of increasing the	It will increase					
concentration of carbon dioxide on the						
rate of photosynthesis?			-			
What is the effect of increasing the	It will increase at first, but if it gets too					
temperature on the rate of	hot it will decrease and stop					
photosynthesis?	Boil it in water to kill it					
How can a leaf be tested for carrying out photosynthesis?						
photosynthesis:	 Put it into boiling ethanol to remove the chlorophyll (green colour) 					
	Add iodine which will turn blue/black					
	if starch is present					
What piece of equipment could be used	A gas syringe					
for measuring the volume of gas	Or					
produced during photosynthesis?	An unturned measuring cylinder filled					
produced darming principly minimum.	with water					
Suggest three reasons that plants are so	They produce oxygen which is					
important to life on Earth.	essential for life on Earth					
	They provide biomass which is used					
	by animals as food					
	They remove carbon dioxide from the					
	atmosphere which prevents global					
	warming and the Earth becoming too					
	hot					

Suggest three ways in which leaves are adapted for photosynthesis.	 Large flat shape increases surface area for absorbing sunlight Stomata (holes on the bottom of the leaf) allow gases to enter and leave Large spaces between cells allow gases to diffuse Palisade cells contain lots of chloroplast 				
What is the name of vessels which	Xylem				
transport water through the plant?	7.7.5				
What is the name of vessels which	Phloem				
transports sugars through the plant?					
How are leaves adapted to prevent	Waxy layer on top				
excessive water loss?	Stomata open and close allowing				
	water to be trapped if it is too hot				
Which part of the plant absorbs water?	Roots (root hair cells)				
How are root hair cells adapted for taking in lots of water?	They have a large surface area				
Apart from water, what else do the roots absorb?	Mineral ions (especially nitrates, but also magnesium, potassium, calcium and phosphate)				
What are nitrate ions used for in a plant?	Making proteins				
Which elements are found in nitrate ions?	Nitrogen and oxygen				
What are magnesium ions used for in plants?	Producing chlorophyll				
What can farmers add to their fields if there are not enough nutrients in the soil?	Fertilisers				
What are 3 issues with the use of fertilisers?	 They can run off into rivers causing: Excessive growth of algae Polluted drinking water Death of fish and other animals 				
What do we call the process of adding and removing carbon from the atmosphere?	The carbon cycle				
Which process add carbon (as carbon dioxide) to the atmosphere?	RespirationCombustionDecomposition (by bacteria and fungi)				
Which process removes carbon from the atmosphere?	Photosynthesis				

Name the labelled parts of the	A stigma		1	-1	- 1			\neg
Name the labelled parts of the	A – stigma							
reproductive system in flower plants:	B – style							
1a	C – ovary							
	D – ovule							
A de la companya della companya della companya de la companya della companya dell	E – anther							
b	F – filament							
C E								
(do)								
What is the male reproductive organ	Stamen		-					_
called in a plant?	Stanien							
Which parts make up the male	Anther and filament							-
reproductive organ in a plant?								
What is the female reproductive organ	Carpel		\exists				\dashv	\dashv
called in a plant?	·							
Which parts make up the female	Stigma, style, ovary and ovule		1					\exists
reproductive organ in a plant?								
What is the name for the transfer of	Pollination							
pollen to the stigma of a flowering plant?								
By which two main methods does	Insect pollination							
pollination occur?	Wind pollination							
What is the role of the petals in flowering	To attract insects							
plants?								
What is the role of the sepals in flowering	To protect the plant's reproductive							
plants?	system							
What is the male gamete in plants?	Pollen							
What is the female gamete in plants?	Eggs							
Describe how fertilisation occurs in	Pollen travels from the stigma down the							
flowering plants.	style. It then enters the ovule and							
	combines with the egg.							
What is formed following fertilisation of	A seed							
an egg cell?								
What is the scientific word for 'spreading	Dispersal							
out seeds'?								
By which methods can seed dispersal	By wind							
take place?	By animals							
	By explosion							
	By water							
Why is it important for seeds to be	To avoid competition for							
dispersed?	water/light/other resources							
How are coods which was discountly	Thou have a parachute or wines to all	+	 _		-		+	=
How are seeds which use dispersal by wind adapted?	They have a parachute or wings to allow them to travel further							
willia adapted:	them to traverruitiles							
	1							

Biology – reproduction in plants

	<u> </u>		 	 	
How are seeds which use dispersal by animals adapted?	 They have sweet flesh to encourage animals to eat them A hard seed coat to avoid the seed being digested Brightly coloured skin to attract animals 				
How are seeds which use dispersal by	The outside (husk) is made of fibres				
water adapted?	which trap air. This helps them to float.				
What three things are required for	Water				
germination to occur?	 Oxygen 				
	Warmth				
Name the labelled parts of the	A – food store				
germinating seed:	B – seed coat				
a	C – shoot embryo D – root embryo				
What are the stages involved in	 Water softens the seed coat 				
germination?	 The food store dissolves in the water and reacts with oxygen, releasing energy Roots and shoots start to form Shoots break through the soil and can start to photosynthesise 				

							_
What are the names of each labelled part	A – bladder						
of the male reproductive system:	B – penis						
	C – sperm duct						
(a)))\\	D – urethra						
	E – testis						
b d	F – scrotum						
	G – foreskin						
							_
What is the role of each of the following:	 Bladder – stores urine 						
Bladder	 Sperm duct – transports sperm from 						
Sperm duct	the testes to the urethra						
Urethra	 Testis – produces and stores sperm 						
Testis	 Scrotum – expands and contracts to 						
Scrotum	control to temperature of the testis						
What are the names of each labelled part	A – ovary						
of the female reproductive system:	B – oviduct (fallopian tube)						
	C – uterus						
	D – cervix						
lima C	E – vagina						
e							
What is the role of each of the following:	Ovary – develops and releases eggs				1		
Ovary	• Oviduct – contains cilia (small hairs)						
Oviduct	which sweep eggs towards the uterus						
Uterus	Uterus – where the baby will develop						
Cervix	 Cervix – holds the baby in place 						
	during pregnancy						
What is the scientific term for 'sex cells'?	Gametes					\top	_
In humans, what is the male gamete?	Sperm						_
In humans, what is the female gamete?	Ovum (egg)						_
What is the term used to describe the	Fertilisation					\top	_
process of combining an ovum with a							
sperm cell?							
What is the scientific term for a fertilised	Zygote						_
egg cell?	, , ,						

How are sperm cells adapted for their role?	 They have a flagellum (tail) for swimming They have a streamlined shape They have an acrosome which contains enzymes for entering the egg cell They have lots of mitochondria to provide energy They have a nucleus with half the number of chromosomes 				
How are egg cells adapted for their role?	 They contain a large glucose store to provide energy during the first part of growth The cell membrane hardens once a sperm has entered to egg to prevent multiple sperm entering They have a nucleus with half the number of chromosomes 				
How many chromosomes are there in gametes?	23				
How many chromosomes are there in normal body cells?	46 (23 pairs)				
How many days does a menstrual cycle normally last for?	Between 24 and 28 days				
What happens at the beginning of the menstrual cycle?	Menstruation – the lining of the uterus is broken down giving the woman her period				
What follows this stage?	The lining of the uterus starts to rebuild and an egg develops inside one of the ovaries.				
On which day of the menstrual cycle is an egg released?	Day 14				
What happens after the egg is released?	The egg travels down the oviduct towards the uterus				
If the egg is fertilised, what will happen?	It will implant on the wall of the uterus and begin to divide				
If the egg is not fertilised, what will happen?	The lining of the uterus will break down and the egg will be passed out along with it. The cycle restarts.				
What is the term used for the period in which a fetus is growing inside the uterus?	Gestation				
How long is the gestation period in humans?	Nine months	Ī			
How is the fetus protected whilst inside the uterus?	It is suspended in the amniotic fluid (inside the amniotic sac)				
How does the fetus get nutrients whilst in the uterus?	Nutrients are transported through the placenta, and then carried in the umbilical cord which attaches the mother to the fetus.				

Biology – reproduction in animals

What is the potential impact of the mother drinking alcohol during pregnancy?	Premature birth, low birth weight and brain disorders				
What is the potential impact of the mother smoking during pregnancy?	Premature birth, low birth weight and heart/breathing problems				
How are waste products (e.g. carbon dioxide) excreted by the fetus?	The waste products travel through the umbilical cord, pass across the placenta, and are then excrete by the mother.				
Whose blood flows inside the umbilical cord?	The fetus'				
What changes take place in the body during puberty?	 Grow more body hair Penis enlarges (in men) Voice deepens (in men) Menstrual cycle starts (in women) Breasts develop (in women) Hormones (testosterone in men and oestrogen in women are produced) 				

What are the seven substances required by the body (5 are nutrients, 2 are not)?	 Carbohydrates Protein Fats (lipids) Vitamins Minerals Fibre (not a nutrient) Water (not a nutrient) 				
What are the two main types of carbohydrate?	Sugar and starch				
What is the role of carbohydrates in the body?	Energy (sugar – quick release, starch – slow release)				
What is the role of protein in the body? What is the role of lipids in the body?	Growth and repair of body tissue Energy, insulation, and protection of organs				
What is the role of fibre in the body?	Keeps food moving through the body preventing constipation				
What is the role of water in the body?	Regulates temperature and maintains other bodily functions.				
What are the roles of the follow minerals:CalciumIron	Calcium – strengthens bones and teeth Iron – used in the production of red blood cells				
What are the roles of the following vitamins: • Vitamin A • Vitamin C	Vitamin A – maintains good eyesight and healthy skin Vitamin C – growth and repair of tissues and strengthens the immune system				
What food is a good source of the following nutrients: Starch Sugar Protein Lipids Fibre Water Calcium Iron Vitamin C	 Starch – pasta, rice, bread Sugar – Chocolate, fruit Protein – Meat, beans, eggs Lipids – Cheese, crisps Water – Milk, fruit juice Calcium – Dairy products Iron – red meat, beans, spinach Vitamin C – Citrus fruits 				
What is the consequence of a lack of vitamin C in the diet?	Scurvy – causes bleeding gums				
What is the consequence of a lack of calcium in the diet?	Rickets – soft/weak bones and stunted growth				
Describe the test for starch.	lodine turns from orange/brown to blue/black				
Describe the test for glucose.	Benedict's solution turns from blue to yellow/orange/red when heated.				
How could the amount of energy contained in a food be determined?	Burn the food underneath a test-tube of water.				

	Measure the temperature rise of the water.					
Suggest two variables which should be controlled during this investigation.	 Same mass of food Same distance from test tube Same volume of water Same starting temperature of water 					
Which substances break down food chemically?	Enzymes					
Which enzyme breaks down starch?	Amylase					
What is starch broken down into?	Simple sugars					
What is the consequence of taking in too little energy?	Weight loss					
What is the consequence of taking in too much energy?	Weight gain (and ultimately obesity)					
What is the difference between starvation and malnutrition?	Starvation is a lack of food Malnutrition is a lack of certain nutrients.					
State the names of the organs (in order) involved in the digestion of food.	 Mouth Esophagus Stomach Small intestine Large intestine Rectum Anus 					
What happens in the mouth?	Food is ingested and then broken down mechanically by the teeth and chemically by enzymes in the saliva					
What are the four main kinds of teeth?	IncisorsCaninesPre-molarsMolars					
What is the role of each kind of tooth: Incisors Canines Pre-molars Molars What happens in the stomach?	 Incisors – cutting food Canines – tearing food Prep-molars – tearing and crushing food Molars – grinding food Food is compressed by the contracting stomach wall. Bacteria are killed by stomach acid. 					
What is the effect of plaque on teeth?	Plaque provides a breeding-ground for bacteria, causing tooth decay					
What happens in the small intestine?	Nutrients diffuse into the bloodstream through the villi					
What happens in the large intestine?	Excess water is removed					
	The state of the s				-+	

What is the definition for the word	A state of complete mental physical and					
	A state of complete mental, physical and					
'health'?	social wellbeing. It is not merely the					
	absence of infirmity (illness).					
What is the scientific definition for the	A substance taken into the body that					
word 'drug'?	modifies or affects chemical reaction					
	inside the body					
What are some of the short-term risks of	Impaired judgement					
drinking alcohol?	Dehydration					
What are some of the risks to health of	Liver damage					
drinking larger amounts of alcohol?	Heart disease					
	Obesity (it can contain lots of energy)					
	Damage to sex organs					
What are some of the risks to health of	Paranoia					
taking recreational drugs such as	Memory loss					
marijuana?	Addiction					
Which three harmful chemicals are found	Carbon monoxide					
in cigarette smoke?	Nicotine					
iii cigarette sirioke:	Tar					
Why is earlien manayida harmful?			-			
Why is carbon monoxide harmful?	It binds to your red blood cells preventing					
	them from transporting oxygen around					
	your body					
Why is nicotine harmful?	It is addictive, making you crave more					
	cigarettes					
Why is tar harmful?	It reduces the surface area of your lungs,					
	reducing gas exchange.					
What are some elements of a healthy	A balanced diet					
lifestyle?	Exercise					
	Positive social interactions					
What are some of the key benefits of	Reduces obesity					
exercise?	Increases strength					
	 Improves heart and lung function 					
What is the definition for a non-infectious	A disease which cannot be passed from					
(or non-communicable) disease?	one organism to another.					
Give two examples of non-infectious	Cancer					
diseases.	Heart disease					
	Diabetes					
	Lung disease					
What is the definition for an infectious	A disease which can be passed from one					
disease?	organism to another.					
What are infectious diseases caused by?	Pathogens (disease causing organisms)	\dashv	+			
What are the four types of pathogen?	Bacteria	+	+		+	
what are the rour types or pathogen!						
	• Fungi					
	Viruses Protectists					
Circ true everendes of discourse and the	Protoctists	+	-			
Give two examples of diseases caused by	Plague Chalana					
bacteria.	• Cholera					
	Tuberculosis					

Give two examples of diseases caused by	• Flu					
viruses.	• HIV					
viruses.	Herpes					
How to viruses reproduce?	They attach to a body cell		-			
now to viruses reproduce:	The viral genes instruct the cell to					
	make copies of the virus					
	The cell bursts causing the copied					ł
	viruses to escape					}
How do bacteria reproduce?	By binary fission					
now do bacteria reproduce.	The bacterial cells divide					ł
	approximately every 30 minutes					
How can pathogens be spread?	In food and water					
The Work pathogens at spread.	In the air					
	Through bodily fluids (blood or sexual)					
	fluids)					ł
	Through animal vectors (e.g.					ł
	mosquitos)					
What physical defences does the body	• Skin				-	
have against pathogens?	Cilia and mucus					
nave against patriogens.	Blood clots					}
What chemical defences does the body	White blood cells					
have against pathogens?	 Lysozymes (enzymes in tears which 					}
nave against patriogens.	break down bacteria)					1
Which pathogens can be controlled using	Bacteria Bacteria					
antibiotics?						
Why is our body unable to start fighting	The antibodies which 'match' the					
new pathogens straight away?	pathogen's antigens must be found.					1
How are lymphocytes used to fight	Once the 'correct' white blood cells					
pathogens?	have been found, they replicate					ł
patrio Berrer	Antibodies are released by the white					ł
	blood cell which attach to the					
	antigens on the pathogen					}
	This disables the pathogen					ł
What are memory lymphocytes?	Lymphocytes which remain in the					
	bloodstream after the pathogen has been					
	destroyed.					
Why are memory lymphocytes	They can act quickly if the same pathogen					
important?	enters the body again, preventing you					
	from getting ill					
						}
What is a vaccination?	A weak or inactive form of the pathogen	$\vdash \vdash$	+			
vinacio a vaccination:	which triggers the production of					
	lymphocytes in the body. This means that					
	when the 'full' version of the pathogen					
	enters the body, memory lymphocytes					
	are already in the bloodstream.					i

Suggest two things that we can personally do to act as a defence against disease.	 Maintain good hygiene (handwashing, tooth brushing etc.) Eat a balanced diet Take regular exercise Resting Not smoking or drinking excessive volumes of alcohol 				
What are the responsibilities of a community in preventing disease?	 Providing medical care Removing rubbish Providing safe drinking water Maintaining high standard of health and hygiene in businesses 				

What type of diagram is used to describe the feeding links between different	A food chain				
organisms?	The transfer of energy from one erganism				+
What does an arrow represent in a food chain?	The transfer of energy from one organism to another				
					+
What happens to the amount of energy	It decreases				
transferred as you move through a food chain?					
Suggest three reasons the energy	Organisms use some energy for				+
transferred will decrease?	movement				
transferred will decrease.	Organisms use some energy for				
	keeping warm				
	Organisms may reproduce and				
	transfer energy in growing their				
	offspring				
Why are there normally no more than 4	There is insufficient energy remaining to				
or 5 levels in a food chain?	be transferred				
What are the different levels in a food	Trophic levels				
chain called?					
What is the term used to describe the	Producer				
first organism in a food chain?					\perp
From where to producers get their	The sun – through photosynthesis				
energy?					
What is a herbivore?	An organism which feeds on plants				\perp
What is a carnivore?	An organism which feed on the flesh of				
	other animals				<u> </u>
What is an omnivore?	An organism which eats both plants and				
	meat				
Put these organisms into a food chain:	Corn → Mouse → Snake → Hawk				+
Mouse					
Hawk					
Snake					
Corn					
What would be the effect on each of the	The population of hawks would fall – less				+
other organisms of all of the snakes	prey				
catching a disease and dying?	The population of mice would increase –				
	less predators				
	The population of corn would fall – more				
	predators (mice)				
What type of diagram is used to describe	Food webs				\top
interlinked food chains?					
What is the name	Pyramid of numbers			Ī	
for this type of Weadpecker (Secondary consumer)					
diagram?					
(Primary consumer)					
**					
Oak tree (Producer)					

Why may it be a problem to introduce a	It is difficult to know what effect it will					
new species into an ecosystem?	have on the food web. Native species may die out.					
What piece of equipment may be used to	A quadrat					
estimate the population of plants or						
small, slow moving animals?						
How should a quadrat be used to	Place the quadrat randomly in the					
estimate population in an area?	area.					
	2. Count the number of organisms of					
	that species inside the quadrat					
	3. Repeat this a number of times and					
	find the mean 4. Multiply the mean by the number of					
	quadrats which will fit inside the area					
Which part of this method is increasing	Taking multiple samples and calculating		T		+	
the reliability?	an average					
What may cause the population of a	Increased competition for resources					
species to fall?	Increased predation					
	Disease					
	Pollution					
Which resources may plants compete	Habitat lossWater					
for?	Light					
	Carbon dioxide					
	• Space					
	Nutrients					
Which resources may animals compete	• Food					
for?	Water					
Booth the description of	• Shelter					
Describe the shape of a population curve.	Increases slowly at first, then faster as					
	time goes on. Reaches a maximum point.					
Explain, giving reasons, the shape of the	The graph starts slowly because there					
population curve below:	are not many organisms which are					
carrying capacity (K) of environment	reproducing					
	The graph gets steeper as more					
ezis	organisms reach maturity and can					
population size	reproduce					
	The graph levels off because of disease, competition or predation					
	disease, competition of predation					
0 time						
What does the word 'conservation'	Protecting the environment though					
mean?	management					
			1			

What are some of the problems of deforestation?	 Habitat loss and extinction of species Reduced soil fertility Flooding and landslides Changes to the atmosphere (less oxygen, more carbon dioxide, drier air) 				
What are some conservation activities which may be carried out?	 Creation of new habitats – plants new trees, digging a garden pond Creation of nature reserves Captive breeding – such as in zoos 				
What does the word 'biodiversity' mean?	A range of living organisms				
Why is biodiversity important?	Without biodiversity, it is more likely that the death of one species will result in the death of many more species				

What does the word 'variation' mean?	Differences (between organisms)				
What is discontinuous variation?	Differences which can be put into				
	different groups easily (i.e. cannot be				
	measured on a scale)				
Give three examples of discontinuous	Blood type				
variation.	Eye colour				
	Whether you can roll your tongue				
What is continuous variation?	Differences which can be measured on a				
	scale and can take any value (between				
	limits)				
Give three examples of continuous	Height				
variation.	Weight				
	Head size				
What are genetic variations?	Differences which depend on your genes				
Give two examples of genetic variation	Blood type				
	Eye colour				
	Whether you can roll your tongue				
What are environmental variations?	Differences which depend up factors				
	around you as you grow up				
Give two examples of environmental	Whether you have any scars				
variations.	Hair length				
	Clothes that you wear				
Give two examples of variations which	Height				
are caused by both genes and the	Intelligence				
environment.					
Why does variation exist?	Random mutations in DNA happen which				
	can change the appearance of an				
	organism				
Why do you look similar to your parents?	When the sperm and eggs cells combine,				
	50% (23 chromosomes) of you DNA				
	comes from your mum and 50% comes				
	from your dad.				

What is meant by the term 'species'?	Two organisms of the same species can				
	reproduce to produce fertile offspring				
What is 'natural selection'?	Survival of those organisms within a species which have favourable variations (e.g. sheep living in a cold country with thick wool)				
What are the five stages of evolution?	 Variation exists within a species Environmental conditions change which some organisms are better adapted for Those with favourable variations survive and reproduce The favourable variations are passed on to their offspring This continues over millions of years until a new species emerges 				
How have polar bears evolved to survive in the arctic?	 Thick fur for insulation White fur for camouflage Large paws to stop them sinking into the snow Lage claws for hunting 				
How have cacti evolved to survive in the desert?	 Small/no leaves to reduce water loss Very deep, long roots to absorb water Spikes for protection 				
How have camels evolved to survive in the desert?	 Large humps for water storage Yellow/brown fur for camouflage Large feed to stop them sinking into the sand Long eyelashes to keep sand out of their eyes 				
What evidence do we have for evolution?	Fossils				
What are the 5 kingdoms of life?	AnimalsPlantsFungiProtistsBacteria				
What are the key characteristics of	Have a nucleus				
animal cells?	Do not have a cell wall				
What are the key characteristics of plant cells?	Have a nucleusHave a cell wall made of celluloseContain chloroplasts				
What are the key characteristics of fungal cells?	Have a nucleusHave a cell wall made of chitin				

What are the key characteristics of protist	Have a nucleus
cells?	Unicellular
What are the key characteristics of	Do not have a nucleus
bacterial cells?	Unicellular
What is a vertebrate?	An animal with a backbone
What is an invertebrate?	An animal without a backbone
What are the key characteristics of a	Cold blooded
reptile?	Lays eggs with soft shells
	Has scales and dry skin
What are the key characteristics of an	Cold blooded
amphibian?	Lays eggs in water
	Doesn't have scale
What are the key characteristics of a	Warm blooded
bird?	Lays eggs with hard shells
	Has feathers
What are the key characteristics of a fish?	Cold blooded
	Lays eggs in water
	Has scales and wet skin
What are the key characteristics of a	Warm blooded
mammal?	Doesn't lay eggs
	Feeds its young milk
What are the key characteristics of	Three main body parts
insects?	• 6 legs
	Usually 2 pairs of wings
What are the key characteristics of	Two main body parts
spiders?	• 8 legs
	No wings

What are the names of the 3 states of	Solid, liquid, gas					
matter?	Sona, nquia, gus					
For which state of matter is this the	Liquid					
particle diagram?						
For which state of matter is this the	Gas					
particle diagram?						
For which state of matter is this the	Solid					
particle diagram?						
How are the particles arranged in a solid?	Regular arrangement					
	Particles touching					
How do particles move in a solid?	Vibrate about a fixed point					
How are the particles arranged in a	Random arrangement					
liquid?	Particles touching					
How do particles move in a liquid?	Move around each other					
How are the particles arranged in a gas?	Random arrangementParticles far apart					
How do particles move in a gas?	Move freely					
Explain why gases can be compressed,	There is space between the particles, so					
but solids and liquids cannot.	they can be moved closer together.					
Explain why gases and liquids can flow,	The intermolecular forces in liquids and					
but solids cannot.	gases and weaker than in solids. This					
	means that particles are not fixed in					
	place.					
What are intermolecular forces?	Forces between molecules					
In which state of matter do the particles	Gas					
have most energy?						
What causes gas pressure?	Collision of particles with the container wall					
What is the term used for the random	Brownian motion					
motion of particles?						
What is the definition for diffusion?	The movement of particles from an area of higher concentration to an area of lower concentration.					
What type of change is a change of state?	Physical change					
Triat type of change is a change of state:	i ilysical change					

What is the main difference between a	A chemical change results in new						
chemical change and a physical change?	substances being formed, whereas a						
chemical change and a physical change:	physical change does not						
What are all the changes of state called?	Melting, freezing, evaporating, boiling,						-
what are all the changes of state called:							
What have and to the agreement	condensing and sublimating	+	-	-		+	-
What happens to the arrangement,	The particles gain energy, which means						
movement and energy of particles during	they move faster.						
melting?	This allows them to overcome the						
	attractions between themselves enough						
	to be able to move away from each other						
	and out of their fixed positions.						
What happens to the arrangement,	The particles gain energy, which means						
movement and energy of particles during	they move faster.						
boiling/evaporation?	This allows them to overcome the						
	attractions between themselves enough						
	to be able to move away from each						
	other, which means they are no longer						
	touching.						
What state will a substance be if the	Gas						
temperature is above its boiling point?							
What state will a substance be if the	Liquid						
temperature is between its melting point							
and boiling point?							
What state will a substance be if the	Solid						
temperature is below its melting point?							
What is the melting point of water?	0°C						
What is the boiling point of water?	100°C						
What happens to water when it freezes?	It expands						
Why does water expand when it freezes?	The particles are further apart from each other						
What does this mean happens to the	It decreases (all other solids are denser						
density of water when it freezes?	than their liquid state)						
What are the stages involved in the water	Evaporation (from oceans and rivers)						
cycle?	Condensation (to form clouds)						
•	Precipitation (as rain, snow etc.)						
	Run-off (water flows back to oceans						
	and seas)						
What can be done to increase the rate of	Better air flow (more wind)						
evaporation?	Warmer temperatures						
	Larger surface area (shallower)						
	container)						
How could the volume of water lost over	Measure the mass of water before	+					
a number of days be accurately	the experiment.						
measured?	2. Measure the mass of water after the						
illeasureur	2. Wiedsure the mass of water after the						

What is the definition of the word	The smallest particle of a chemical	1 1			-	
'atom'?	element which can exist.					
What is the definition of the word						
'molecule'?	Two or more atoms chemically joined together					
What is definition of the word	Two or more atoms of different types					
'compound'?	chemically joined together					
What is the definition of the word	Atoms of the same type					
'element'?	,,,,,					
What is the chemical symbol for	Н					
hydrogen?						
What is the chemical symbol for oxygen?	0					
What is the chemical symbol for carbon?	С					
What is the chemical symbol for	N					
nitrogen?						
What is the chemical symbol for sulfur?	S					
What is the chemical symbol for	Mg					
magnesium?						
What is the chemical symbol for sodium?	Na					
What is the chemical symbol for chlorine?	Cl					
What is the chemical symbol for calcium?	Ca					
What is the chemical symbol for copper?	Cu					
What is the chemical symbol for iron?	Fe					
What is the chemical symbol for helium?	Не					
What is the formula of a molecule of	H ₂ O					
water?						
What is the formula of a molecule of	CO ₂					
carbon dioxide?						
What is the formula of a molecule of	O ₂					
oxygen?						
What is the formula of a molecule of	CH₄					
methane?						
What is the formula of sodium chloride?	NaCl					
What is the formula of hydrochloric acid?	HCI					
What is the formula of sodium	NaOH		Ī			
hydroxide?						
What is the formula of calcium	CaCO₃					
carbonate?						
What is the formula of copper sulfate?	CuSO ₄					
What is the formula of sulfuric acid?	H ₂ SO ₄					
How are the chemical elements	In the periodic table					
organised?						
Where are non-metals found in the	At the top-right					
periodic table?						
Will a compound have the same	No (e.g. iron sulphide is not magnetic					
properties as the elements from which it	despite containing iron)					
is made?						

Chemistry – atoms, elements and compounds

What are some properties of metals?	 Malleable Good conductors of heat and electricity Lustrous (shiny) Sonorous (rings when hit) 					
What are some properties of non-metals?	 Brittle Poor conductors of heat and electricity Dull 					
What is the composition of air?	78% nitrogen 21% oxygen 1% other gases (including carbon dioxide)					
What does the ending -ate mean for a compound?	It contains oxygen					

What is the definition of a pure	A substance containing particles of only		1	1		
What is the definition of a pure substance?	A substance containing particles of only one type					
What is the definition of a mixture?	A substance containing particles of more					
what is the definition of a mixture:	than one type					
How can a pure substance be identified?	A pure substance melts and boils at a					
The wear a pare substance be identified.	particularly temperature. A mixture melts					
	and boils across a range of temperatures.					
What happens to the volume of most	They expand					
solids, liquids and gases when they are	They expand					
heated (with the exception of water)?						
How does a thermometer work?	The mercury or alcohol inside expands					
The Wales a thermometer work.	when it gets hot. This forces it up the					
	capillary tube where the temperature can					
	be read-off.					
What is the difference between	Evaporation can happen at any					
evaporation and boiling?	temperature.					
0 .	Boiling occurs at a specific temperature					
	for a particular substance.					
What is the law of conservation of mass?	Mass cannot be gained or lost because					
	atoms cannot be made or destroyed					
What is a solvent?	A liquid into which a substance can be					
	dissolved					
What is a solute?	A solid or a gas which has been dissolved					
What is a solution?	A mixture of a solvent and a solute					
What are three ways to increase the rate	Increase the temperature					
at which a substance will dissolve?	Stir the solvent					
	 Increase the surface area of the 					
	solute (grind it up!)					
What is the term used to describe a	Dilute					
solution with only a small amount of						
solute dissolved?						
What is the term used to describe a	Concentrated					
solution with a large amount of solute						
dissolved?						
What do we call a solution into which no	Saturated					
more solute can be dissolved?						
What is the effect of increasing the	It increases					
temperature upon the mass of solute						
which can dissolve in a solvent?						
What do we call a substance which	Insoluble					
cannot be dissolved in a solvent?						
What do we call a mixture of a solvent	A suspension					
and an insoluble substance?			\perp			
What are the two methods of separating	Decanting					
an insoluble solid from a liquid?	Filtration					
What is decanting?	Allowing solid particles to sink to the				T	
	bottom of a container (sedimentation)					
	and then carefully pouring off the liquid					

What is filtration?	Passing a suspension through a very fine						
	sieve (normally made of paper).						
How does filtration work?	Small, liquid particles, are able to pass						
	through the pores in the filter paper.						
	Larger, solid particles, get trapped and						
	cannot pass through.						
What is the same for the solid that is	Residue						
trapped by the filter paper?							
What is the name for the liquid which	Filtrate						
passes through the filter paper?							
What is the term used for the	Crystallisation						
evaporation of a solvent to form crystals?	,						
What type of mixtures can be separated	Mixtures of substances with different						
using simple distillation?	boiling points. Evaporation and						
aso simple distillation.	condensation only happen once.						
What type of mixtures can be separated	A mixture of different coloured						
• •							
using paper chromatography?	compounds dissolved in a liquid. These						
	substances must have different levels of						
	solubility.						
How is paper chromatography carried	1. A line is drawn in pencil towards the						
out?	bottom of the chromatography paper						
	2. A small spot of the mixture is placed						
	on the line						
	3. The bottom of the chromatography						
	paper is placed in a solvent (usually						
	water) and the water allowed to						
Markey in the a line of decreasing an experience	move up the paper						
Why is the line drawn in pencil?	Graphite doesn't dissolve in water and so						
	won't move up the paper	ļ!					
How high does the water level need to	Between the bottom of the paper and the						
be?	pencil line						
What does it mean if a spot doesn't move	The substance doesn't dissolve in that						
from the pencil line?	solvent						
What does the distance moved by a spot	The further a spot moves, the more						
tell you about the solubility of the	soluble it is						
substance?							
How can you tell the difference between	A pure substance will only have one spot.					1	
pure and impure substances on a paper	An impure substance will separate into						
chromatogram?	multiple spots						
How can you tell if two substances from	They will have the same R _F value (and will						
different mixtures are the same?	have travelled the same distance)						
Which alternative solvents can be used in	Ethanol or propanone						
paper chromatography?							
What is potable water?	Water that is safe to drink						
what is potable water:	vvater that is sale to utilik						
			Ì	l			

How can waste and ground water be made potable?	 Sedimentation (allowing large, insoluble substances to sink to the bottom) Filtration (removes smaller pieces of insoluble material) Chlorination (adding chlorine to kill micro-organisms including bacteria) 				
How can sea water be made potable?	By using distillation (evaporation followed by condensation)				
Why is distilled water more suitable than tap water for chemical analysis?	Distilled water doesn't contain any dissolved salts which may interfere with the results of chemical analysis				
What is suck-back?	When cold water is sucked back through the gas exchange tube after heating has finished				
Why is suck-back dangerous?	When cold liquids come into contact with hot glassware, it can cause it to shatter				
How can suck-back be prevented?	Remove the gas-exchange tube from the liquid before turning off the Bunsen burner				
Which piece of equipment will condense a solvent more effectively than a beaker of ice water?	A Liebig condenser				
Why should a salt solution not be completely dried by being heated?	 The hot salt/solvent may spit out and burn you The heat from the Bunsen flame may cause the salt to break down (decompose) 				

What is the law of conservation of mass when applied to chemical reactions? What is a chemical reaction? What is a chemical reaction? The rearrangement of atoms to form new substances. This involves the breaking and forming of chemical bonds. Suggest some examples of chemical Pipping fruit Possible Setting superglue Cooking food What is a combustion reaction? Which piece of scientific equipment is used for heating things strongly in a lab? Suggest some safety precautions to take when using a Bunsen burner. What type of flame is used for heating things strongly? What type of flame is used for gentle heating, or when the Bunsen burner is not being used? How is a safety flame set using a Bunsen burner; Which part of the roaring blue flame is the hottest? Which 3 things are required for combustion? What is the chemical test for carbon dioxide? combustion.						
What is formed during the incomplete	Carbon monoxide and soot (solid carbon					
combustion of a hydrocarbon?	particles)					
What is the problem with carbon	It binds to your red blood cells preventing					
monoxide?	them from carrying oxygen around the					
	body. This can lead to death.					
What is the problem with soot?	It makes buildings dirty and can cause					
	problems for people with asthma (by					
	irritating the trachea)					
Which human activities release carbon	Any involving burning fossil fuels (driving					
dioxide?	petrol/diesel cars, making electricity etc.)					
What is the impact of carbon dioxide on	Carbon dioxide is a greenhouse gas and					
the climate?	causes heat to be trapped inside the					
	Earth's atmosphere					
How does the greenhouse effect work?	Light from the sun enters the					
	atmosphere and hits the Earth.					
	The Earth absorbs and reemits some					
	of this energy back into space.					
	Greenhouse gases absorb infrared radiation (beat) and recomit it back to					
	radiation (heat) and reemit it back to Earth					
How is sulfur dioxide produced?	Sulfur impurities in coal react with					+
The wissuman anoxide produced.	oxygen creating sulfur dioxide					
What is the problem with sulfur dioxide	Sulfur dioxide dissolves in clouds to					
in the atmosphere?	create acid rain					
'						
What is the problem with acid rain?	It corrodes buildings/statues					
	It kills fish and other aquatic					
	organisms					
How can the production of sulfur dioxide	Burn fewer fossil fuels					
and carbon dioxide be reduced?	Produce electricity using renewable					
	methods					
	Drive electric cars (or walk/cycle)		1	_	+	\perp
What is a thermal decomposition	The breaking down of a substance using					
reaction?	heat	$\vdash \vdash$			+	
What are the products of the thermal	Dehydrated copper sulfate and water					
decomposition of hydrated copper						
sulfate?

What are the products of the thermal	A metal oxide and carbon dioxide						
decomposition of a metal carbonate?							
What is the word equation for the	Copper carbonate → copper oxide +						
thermal decomposition of copper	carbon dioxide						
carbonate?							
What are the products of the thermal	Potassium manganate, manganese oxide						
decomposition of potassium	and oxygen						
permanganate?	, ,						
Why is potassium permanganate referred	It releases oxygen when heated					\neg	+
to as an oxidising agent?	76						
What is an oxidation reaction?	A reaction involving the addition of						_
What is all oxidation reaction:	oxygen to a substance						
What does the term 'reduction' mean?	The removal of oxygen from a substance	\vdash				+	
	· -	\vdash				\dashv	_
What is the word equation for the	Metal + oxygen → metal oxide						
reaction between a metal and oxygen?	Martin State	\vdash	\vdash			\dashv	+
What is the word equation for the	Metal + water → metal hydroxide +						
reaction between a metal and water?	hydrogen						
What is the word equation for the	Metal + acid → salt + hydrogen						
reaction between a metal and an acid?							
What type of salt is created when	A metal <u>chloride</u>						
hydrochloric acid is used?							
What type of salt is created when sulfuric	A metal <u>sulfate</u>						
acid is used?							
What type of salt is created when nitric	A metal <u>nitrate</u>						
acid is used?							
What is the chemical test for hydrogen?	A lit splint makes a squeaky pop						
What is the reactivity series of metals	Potassium						
(including carbon and hydrogen)?	Sodium						
(Calcium						
	Magnesium						
	Aluminium						
	Carbon						
	Zinc						
	Iron						
	Lead						
	Hydrogen						
	Copper						
	Silver						
	Gold	Ш				$\perp \downarrow$	
What is a displacement reaction?	A reaction occurring when a more						
	reactive metal displaces a less reactive						
	metal in a compound						
How can a reactivity series be	React a number of metals with metal						
determined using chemical reactions?	salts (oxides, chlorides etc.). Those metals						
	that react are more reactive.						
What are the products of the reaction	Zinc oxide + iron	\Box				\dashv	\dashv
between iron oxide and zinc?							
	1						

	T		 			
What has been oxidised in the reaction	Zinc (because it has gained oxygen)					
above?						
What has been reduced in the reaction	Iron oxide (because it has lost oxygen)					
above?						
What may less reactive metals be used	 Roofing and piping (lead and copper) 					
for?	Jewellery and electrical contacts (gold					
	and silver)					
What is the corrosion of a metal?	The slow reaction of a metal with oxygen					
What is the name for the corrosion of	Rusting					
iron and steel?]
What is required for rusting?	Oxygen and water					
What is the chemical name for rust?	Iron oxide					
Under what conditions will iron rust most	When it is placed in salt water or dilute					
quickly?	acid]
How could this equipment be used to	The iron wool will react with the oxygen					
determine the percentage of oxygen in	in the air. This will cause the water in the					
air?	test tube to rise. The percentage increase]
fron wool	in height will be the same as the					1
Test-tube	percentage of oxygen in air (approx. 20%)					1
/ /	, , , , , , , , , , , , , , , , , , ,					1
Beaker]
]
Water						
						1
How can rusting be prevented?	Barrier methods (such as painting or					
	using oil)					
	Sacrificial methods (attaching a metal]
	which is more reactive and therefore]
	oxidises more easily than iron does)					
What is galvanisation?	Coating iron or steel in a thin layer of					l
	zinc. This involves both a barrier and a					
	sacrificial method					
What is the term used for metals found	Ores					
combined with other substances?						
What is the term used for metal found	Native metals					
uncombined in the ground?						
Which metals are likely to be found in	Unreactive metals (gold, silver, platinum)					
their native state?						
How are the most reactive metals	Electrolysis – using electricity to split the					
extracted from their ores?	compound					
How are metals which are less reactive	Heating with carbon – causing a					
than carbon extracted from their ores?	displacement reaction					
How are the least reactive metals	Roasting – heating in air	İ	T			
extracted from their ores?						
	1	 			1	

What does this symbol represent and what general precautions would you take when using a chemical that displayed this symbol?	Flammable; keep away from flames (and sources of heat)				
What does this symbol represent and what general precautions would you take when using a chemical that displayed this symbol?	Corrosive; wear gloves and safety glasses (wash away spills with lots of water)				
What does this symbol represent and what general precautions would you take when using a chemical that displayed this symbol?	Generally harmful or irritant to skin/eyes/respiratory system; keep away from skin and eyes				
What does this symbol represent and what general precautions would you take when using a chemical that displayed this symbol?	Toxic; do not swallow, or breathe in, the material or allow it to come into contact with skin				
What does this symbol represent and what general precautions would you take when using a chemical that displayed this symbol?	Can cause harm to life in the environment; avoid release to the environment e.g. don't put down the sink				
What is an acid?	A substance which reacts with a base to produce a salt and water				
What is an alkali?	A base which will dissolve in water				
Which particle do all acids contain?	Hydrogen ions (charged hydrogen atoms)				
Give some examples of every-day acids.	 Lemon juice (citric acid) Vinegar (ethanoic acid) Stomach acid (hydrochloric acid) Tea (tannic acid) 				
Give some examples of every-day alkalis.	SoapOven cleanerToothpaste				

Which scale is used to measure the	pH scale							
strength of acids and alkalis?								
With universal indicator, what colour will	Red; 1-2							
a strong acid turn? What pH does this								
represent?								
With universal indicator, what colour will	Yellow; 5-6							
a weak acid turn? What pH does this								
represent?								
With universal indicator, what colour will	Green; 7							
a neutral substance turn? What pH does								
this represent?								
With universal indicator, what colour will	Blue/green; 8-9							
a weak alkali turn? What pH does this								
represent?								
With universal indicator, what colour will	Purple; 13-14							
a strong alkali turn? What pH does this								
represent?								
What colour will litmus paper turn with	Red							
an acid?								
What colour will litmus paper turn with	Blue							
an alkali?								
How could you prepare an indicator using	Grind up the plant in water							
red cabbage, raw beetroot or	Filter the liquid							
blackcurrants?	Add to acid/alkali							
What is a better method for measuring	Using a pH probe							
pH, rather than using an indicator?

What is the definition of a 'renewable'	One which can be replenished within a				
energy resource?	lifetime				
What are the four examples of non-	• Coal				
renewable energy resources?	• Oil				
3,	• Gas				
	Nuclear				
What are some examples of renewable	Biofuel (biomass)				
energy resources?	• Solar				
5 ,	Wind				
	Wave				
	Tidal				
	Geothermal				
	Hydroelectric				
Suggest three advantages of renewable	No greenhouse gas emissions				
energy resources.	They won't run out				
	Cheap to run				
Suggest three disadvantages of	Can't be used all the time (it's not				
renewable energy resources.	always sunny!)				
	Expensive to set up				
	Only available in certain locations				
Suggest two advantages of non-	High energy density (lots of energy				
renewable energy resources.	for a small mass of fuel)				
	Can be used at any time				
Suggest two disadvantages of non-	Burning fossil fuels emits greenhouse				
renewable energy resources.	gases				
	 Fossil fuels will run out and are 				
	expensive				
What are fossil fuels?	Fuels that we dig up (or extract) from the				
	Earth's crust.				
How are fossil fuels made?	They are formed from dead plants and				
	animals which have been exposed to heat				
	and pressure over millions of years. The				
	pressure comes from layers building up				
	on top of the dead organisms.				
How are fossil fuels used to generate	They are burned and the heat used to				
electricity?	boil water. The steam then turns turbines				
	to generate electricity.				
What are nuclear fuels?	Elements which can undergo nuclear				
	reactions to release large amounts of				
	energy				
What are bio-fuels?	Fuels made from animal waste or plants				
How can the wind be used as a source of	Wind turbines can be used to generate				
energy?	electricity				
What is hydro-electricity?	Electricity generated by water falling				
	through a dam (turning turbines)				
How can the tides be used as a source of	When the tides goes in or out, it can turn				
energy?	turbines in a river or estuary				
<u>.</u>	<u>'</u>	 	1	 L_	 L

Solar cells can use energy transferred by								
radiation from the sun to generate								
electricity								
Energy generated through steam turning								
turbines. The steam is generated using								
hot rocks under the ground.								
The sun								
Water evaporates and is then								
precipitated into rivers/lakes								
Temperature differences cause a flow of								
air (wind). When the wind blows across								
water it makes waves.								
Plants take in light for photosynthesis and								
use it to grow.								
	radiation from the sun to generate electricity Energy generated through steam turning turbines. The steam is generated using hot rocks under the ground. What is energy?	A measure of the work which has been				
	done or work which is able to be done.				
What is the unit for energy?	Joules				
What are the 10 energy stores? Give an example of each.	 Chemical (e.g. a battery, food, matches etc.) Electrical (e.g. charges moving in a circuit) Thermal (e.g. a fire, a radiator) Sound (e.g. someone shouting) Light (e.g. a light bulb) Kinetic (e.g. a car moving) Elastic (strain) (e.g. a rubber band) Gravitational (e.g. climbing a ladder) Magnetic (e.g. magnets attracting/repelling) Nuclear (e.g. the sun, radio-active fuel in a power station) 				
What are the energy transfers taking place when a battery-powered torch is turned on?	Chemical → electrical → light and thermal				
What are the energy transfers taking place when Bunsen burner is used to heat water?	Chemical → thermal				
What are the energy transfers taking place when a roller coaster goes down a hill?	Gravitational → kinetic				
What are the energy transfers taking place when a person rubs their hands together?	Kinetic → thermal				

What is the law of conservation of	Total energy at the start = Total energy at				
energy?	the end				
	Energy cannot be made or destroyed, but				
	it can be transferred from one store to				
	another.				
What do we mean when we say that	The energy has become stored in less				
energy is dissipated?	useful ways (e.g. the surrounding may				
	heat up)				
What is meant by the term 'efficiency'?	The proportion of energy which is				
	transferred to 'useful' energy stores.				
How can efficiency be calculated?	$Efficiency = \frac{useful\ energy\ transferred}{total\ energy\ supplied}$				
	This can be multiplied by 100 to give a				
	percentage				
What is a Sankey diagram?	A diagram showing the efficiency of an				
	energy transfer				
How can unwanted energy transfers be	Using lubrication in moving systems				
reduced?	 Using insulation where thermal 				
	energy is needed				
What is the term used for something	A transducer				
which can transfer energy from one store					
to another?					
What is temperature?	A measure of the average kinetic energy				
	of the particles in a substance				
What are the units of temperature?	 Degrees Celsius (°C) 				
	Degrees Kelvin (K)				
Convert 0 K to °C	-273°C				
What is another name for 0 K?	Absolute zero				
Why can the temperature of a substance	At absolute zero, the particles have no				
not go below absolute zero?	kinetic energy.				
What is the name for a substance which	A conductor of heat				
allows heat to be transferred easily?					
How does conduction transfer heat?	The particles vibrate and collide with				
	each other, transferring the energy				
In which direction is heat transferred?	From hotter objects to colder objects				

What is a force?	Something which changes the speed,	П		1					
What is a force:	direction or shape of an object								
What are the units for force?	Newtons (N)	H							
Which piece of equipment could be used	Force meter (Newton meter)								
to measure a force?	Torce meter (wewton meter)								
How do we represent forces in diagrams?	Using arrows (showing the size and				+				
Thow do we represent forces in diagrams.	direction of the force)								
What do we call the sum (or total) of all	The resultant force				+				
of the forces acting on an object?	The resultant for se								
What is a contact force?	A force which requires objects to be								
	touching for the force to act								
Give 4 examples of contact forces.	Normal contact force								
, , , , , , , , , , , , , , , , , , ,	Tension								
	Friction (including air/water								
	resistance)								
	Upthrust								
	• Lift								
What is a non-contact force?	A force which does not require objects to								
	be touching to act.								
Give 3 examples of non-contact forces.	Gravitational force								
	Magnetic force								
	Electrostatic force (force between								
	charged particles)				_				
What is the equation which links speed,	$Speed = \frac{distance}{time}$								
distance and time?		Ш			_				
Which piece of scientific equipment may	Ruler, tape measure etc.								
be used to measure distance?	Charalad				-				
Which piece of scientific equipment may	Stop clock								
be used to measure time?	Nature was a second (sec/e)			-				-	
What are the units used for speed?	Metres per second (m/s)	\vdash		-	+				
What are the units used for distance?	Metres	\vdash		-	+				
What are the units used for time?	Seconds	$\vdash\vdash$			-				
How can minutes be converted to	Multiply by 60								
seconds? How can hours be converted to seconds?	Multiply by 60 twice (or multiply by 3600)								
	, , , , , , , , , , , , , , , , , , , ,	$\vdash\vdash$			-				
How can kilometres be converted to metres?	Multiply by 1000								
What is 'relative motion'?	The speed of a moving object compared	\vdash							
villat is relative illution !	to another moving object								
How is relative speed calculated for	Fastest speed – slowest speed	\vdash		+	+	-			+
objects moving in the same direction?	1 astest speed - slowest speed								
How is relative speed calculated for	Speed of object A + speed of object B	\vdash	\vdash	+	+	+	+	+	+
objects moving in opposite directions?	Speed of object A i speed of object b								
On a distance-time graph, what is	Moving forward at a constant speed	\vdash		+	+	+	+		+
represented by a straight line moving up?									
On a distance-time graph, what is	Moving backwards at a constant speed	\vdash		+	+	+	+	+	
represented by a straight line moving	and the second s								
down?									
	I .						I		

On a distance-time graph, what is	A stationary object					
represented by a flat line?						
How can the speed of an object be	By calculating the gradient (steepness of					
calculated using a distance-time graph?	the lines) –					
	change in distance					
	change in time					
On a distance-time graph, what does a	Moving quickly					
steep line represent?						
On a distance-time graph, what does a	Moving slowly					
shallow line represent?						
In which direction does gravity act?	Towards the centre of mass (e.g. the					
	centre of the Earth)					
Which two factors do the strength of	The mass of both objects					
gravity depend upon?	The distance between the objects					
If the mass of the object increases, what	It increases					
happens to the size of gravity?						
If the distance between the objects	It decreases					
increase, what happens to the size of						
gravity?						
What is the meaning of the word 'mass'?	The amount of matter (stuff) that an					
	object is made up of					
What is the meaning of the word	A force caused by gravity acting upon a					
'weight'?	mass					
What is the equation which links weight,	$Weight = mass \times gravitational field strength$					
mass and gravitational field strength?						
What are the units for mass?	Kilograms (kg)					_
What are the units for weight?	Newtons (N)					
What are the units for gravitational field	Newtons per kilogram (N/kg)					
strength?						

If forces are balanced, what is the size of	Zero				
the resultant force?					
If no resultant force acts upon an object,	It will remain at a constant speed, in a				
what will happen to its motion?	constant direction (or will be stationary)				
If two forces are acting in the same	Add the forces together				
direction, how can the resultant force be					
calculated?					
If two forces are acting in opposite	Take the smaller force away from the				
directs, how can the resultant force be	larger force				
calculated?					
What is Hooke's law?	The amount of stretch for a spring is				
	directly proportional to the mass added.				
Which equation links: force, extension	$Force = spring \ constant \times extension$				
and spring constant

Why does a drawing pin (see picture) go into the wall, but not hurt your thumb?	The area of the pointed bit is small, and therefore the pressure is high. The area of the flat bit is large, and therefore the pressure small.				
Suggest 4 more examples of ways in which pressure is used in everyday life.	 Studs on football boots sink into the ground A sharp knife cuts things easily A camel has a large foot to prevent it sinking into the sand Large tractor tyres stop the tractor from sinking into the mud 				

What is the equation which links: density, mass and volume?	$Density = \frac{mass}{volume}$				
What are the units for mass?	Kilograms (kg)	+			
What are the units for volume?	Metres cubed (m³) or centimetres cubed (cm³)				
What are the units for density?	Kilograms per metres cubed (kg/m³) or grams per centimetre cubed (g/cm³)				
What is the link between centimetres cubed (cm³) and millilitres (mL)?	They are the same				
Which state of matter has the greatest density (with the exception of water)?	Solids				
Why do solids have the greatest density?	The particles are most closely packed together in this state				
Which state of matter has the smallest density (with the exception of water)?	Gases				
Why do gases have the smallest density?	The particles are most widely spaced in this state				
Which piece of equipment is used to measure mass?	A balance				
Which piece of equipment is used to measure volume?	A ruler (length x width x height) for regular shapes Or A measuring cylinder if a displacement can is used				
How should a displacement can be used to measure volume of an irregular shape?	 Fill the displacement can with water Add the object and collect the water which run out of the spout in a measuring cylinder 				

What is a wave?	A transfer of energy without the transfer of matter						
What are the 3 key properties which are		+				-	
used to describe a wave?	Amplitude Mayolongth						
used to describe a waver	Wavelength						
	• Frequency	+	_				
What is the definition for the amplitude	The maximum displacement of a point on						
of a wave?	the wave from its rest position (or – the						
	height of the wave)						
What are the units for amplitude?	Metres (m)						
What is the definition for the wavelength	The distance between equivalent points						
of a wave?	on adjacent waves (or – the distance						
	between 2 peaks on a wave)						
What are the units for wavelength?	Metres (m)						
What is the definition for the frequency	The number of waves passing a point in						
of a wave?	one second						
What are the units for frequency?	Hertz (Hz)						
What causes a sound?	A vibrating object						
How does sound travel from the vibrating	The vibrating object causes particles in	\dagger					
object to our ears?	the medium (normally the air) to vibrate,						
	transferring the energy to our ears						
How is sound detected by our ears?	The eardrum vibrates	+					
In a sound wave, do the particles in the	Parallel						
medium (air) vibrate parallel or							
perpendicular (at right angles) to the							
direction that the wave is moving?							
How can a sound be made louder?	Increasing the size of the vibrations	╁					
	Increasing the size of the vibrations	+					
Which property of the wave would this increase?	The amplitude						
Why do sounds get quieter the further	The vibrations lose energy, causing						
away that you get from the source?	particles to vibrate with a smaller						
	amplitude						
How do sounds echo?	The sound waves are reflected by a						
	boundary						
What is an important use of this?	Echo-location (e.g. to locate shipwrecks,						
•	submarines etc. and to determine the						
	depth of the sea)						
Which states of matter can sounds travel	Solids, liquids and gases	+		+			
through?	2525)						
Why can sound not travel through a	There are no particles to vibrate	++	+			\dashv	
vacuum?	There are no particles to vibrate						
Which state of matter will sounds travel	Solids	\forall	+				
fastest in?							
Explain why sounds will travel fastest in	The particles are closest together,	+	+				
solids.	allowing the vibrations to be transferred						
	most easily						
	most cashy						
		Ш					

Suggest a method for measuring the speed of sound. What is the speed of sound? What is the speed of light? Suggest two situations where we can detect the difference in speed between sound and light.	 Stand in front of a wall (or cliff) and bang two sticks together Measure the time taken for the echo to reach you Use: Speed = distance to determine the speed of the wave Note: remember to double to distance to the wall because the sound has travelled there and back 330 m/s Thunder and lightning Fireworks 				
Which piece of scientific equipment can produce an image (or trace) of a sound wave?	Oscilloscope				
What will cause a higher pitch sound?	A higher frequency vibration (or vibrations per second)				
What range of frequencies can be detected by humans?	20 – 20000 Hz				
What happens to this range of hearing as you get older?	It gets smaller (~30 – 16000 Hz)				
Name the labelled parts in the diagram below:	A – ear lobe B – ear canal C – ear drum D – 3 small bones (hammer, anvil and stirrup) E – cochlea F – auditory nerve (to the brain)				
What is the function of each of the parts of the ear? Ear lobe Ear canal Ear drum 3 small bones Cochlea Auditory nerve	Ear lobe – to collect the sound waves Ear canal – to channel the vibrations towards the ear drum Ear drum – to vibrate, transferring the sound to the inner ear 3 small bones – to transfer vibrations to the cochlea Cochlea – contains a liquid and small hairs which wave back and forth due to the vibrations Auditory nerve – transports electrical signals to the brain which can then be interpreted as sounds				

What could be the effects on the ear of	 Perforated (broken) ear drum – 					
hearing very loud sounds?	temporary deafness					
	Damage to the cochlea – permanent					
	deafness					
What is the term used for an object	Luminous					
which gives out light?						
How does light travel?	As a wave					
	In straight lines					
	At 300 million m/s					
How can non-luminous objects be seen?	Light is reflected by these objects					
In which direction do light rays travel?	From a luminous object to your eyes					
What is the term used for an object	Opaque					
which absorbs or reflects light (does not						
transmit light)?						
What is the term used for an object	Translucent					
which transmits and scatters light?						
What is the term used for an object	Transparent					
which transmits light in straight lines?						
How are shadows made?	An opaque object is placed in front of a					
	light source					
What is the effect of moving an opaque	The shadow created will be larger					
object closer to the light source?						
Why can light travel through a vacuum?	It doesn't need particles to be					
	transmitted					
What is the law of reflection?	Angle of incidence = angle of reflection					
What is the 'normal'?	A line at 90° to the surface of the mirror					
What is the angle of incidence?	The angle made between the incoming					
	ray of light and the normal					
What is the angle of reflection?	The angle made between the reflected					
	ray of light and the normal					
What types of objects make good	Smooth, shiny surfaces					
mirrors?						
What happens when light is reflected by	The rays are scattered					
a rough surface?						
What is the name used for this	Periscope					
arrangement of mirrors?						
Light Ray						
Eye						
Miles and the second se			\perp	+	+	\perp
What might a periscope be used for?	Seeing over a wall					
	In submarines to see above the water					

	4 1:1.7 (1 1 11:1.) (1 11	T		1	- 1	
Use this diagram to explain how a pinhole	1. Light (or reflected light) from the					
camera works:	object passes through the pinhole					
pinhole	The light hits the screen at the back of the camera					
	The image is upside down because					
	the light rays travel in straight lines					
real object	the light rays traver in straight lines					
image of object on screen						
What is a pinhole camera used to	An eye					
represent (in a very basic way)?						
What is the name used to describe the	Refraction					
bending of light due to a change in the						
density of the medium?						
If light passes from a less dense medium	It will slow down					
(e.g. air) to a more dense medium (e.g.						
water or glass), what will happen to the						
speed of the wave?						
If light passes from a less dense medium	It will bend towards the normal					
(e.g. air) to a more dense medium (e.g.						
water or glass), what will happen to the						
direction of the wave?						
If light enters a medium with a difference	It will continue in the same direction					
density whilst travelling along the normal,						
what will happen to the direction of the						
wave?						
What is the difference between different	The frequency					
colours of light?						
What is white light?	A mixture of all of the different colours of					
	light					
In order, what are the different colours in	Red					
white light?	Orange					
	Yellow					
	Green					
	Blue					
	Indigo					
	Violet					
What happens when white light is passed	It is split up into each of the different			İ		
through a water drop (or a prism)?	colours to produce a rainbow					
What is the name for this effect?	Dispersion					
Why does dispersion happen?	Different colours of light are refracted					
	(bent) by different amounts. Red is					
	refracted least. Violet is refracted most.					

What is an electric current?	A flow of charged particles (electrons in wires)					
What does this circuit symbol represent?	A cell					_
⊣ ⊢

What is a series circuit?	A circuit which only has one path for the						
	electrons to take						
What is a parallel circuit?	A circuit which has multiple paths which						
	the electrons can take						
In a series circuit, what is the effect of adding another bulb?	The bulbs will be dimmer						
In a series circuit, what is the effect of	The bulbs will be brighter	+					
adding another battery (or increasing the	The builds will be brighter						
voltage of the power pack)?							
In a series circuit, what is the effect of	All of the other bulbs will go out						
one of the bulbs breaking?							
In a parallel circuit, what is the effect of	The brightness will not change		Ī				
adding another bulb (in a separate							
branch)?	The harden will be beginner	+					
In a parallel circuit, what is the effect of	The bulbs will be brighter						
adding another batter (or increasing the voltage of the power pack)?							
In a parallel circuit, what is the effect of	All of the other bulbs will remain lit	+					
one of the bulbs breaking?	2 2						

What are the units for current?	Amperes (or amps) (A)					
Which component is used to measure the	Ammeter					_
current?	, anniece.					
Should an ammeter be connected in	In series (because the electrons need to					_
series or in parallel?	flow through it)					
In a series circuit, how does the current	The current is the same everywhere in a					_
vary?	series circuit					
In a parallel circuit, how does the current	The current is split amongst the branches.					_
vary?	The electrons them recombine to go					
	through the battery (or cell)					
What is electrical resistance?	A measure of the difficulty of passing					
	electric current through a material or					
	component					
Suggest 3 materials with a low resistance.	Metals (particularly copper)				Ī	
	Graphite (in pencils)					
	Salt water					
What is another name for materials with	Electrical conductors					
a low resistance?						
Suggest 3 materials with a high	Rubber					
resistance.	Wood					
	• Air					
What is another name for materials with a high resistance?	Electrical insulators					
How can the resistance in a circuit be	Adding components (e.g. bulbs, buzzers,					
increased?	motors, resistors)					
What is a fixed resistor?	A resistor which has a constant resistance					
What is a variable resistor?	A resistor where the resistance can be					
	changed					
What is a light dependent resistor?	A resistor where the resistance changes					
	depending on the light intensity					
What is the effect of increasing the light	High light intensity = lower resistance					
intensity on the resistance of an LDR?						
What is a reed switch?	A switch which is opened and closed					
	using a magnetic field					
What is a relay circuit?	A circuit which can be turned on an off					
	using another circuit. This involves an					
	electromagnet and a reed switch					
What is the effect of increasing the	The current will decrease					
resistance in a circuit on the current?						
Explain why the current decreases when	The electrons move more slowly because					
the resistance is increased.	it is harder for them to move through the					
	circuit					

In the series circuit below, what is the	Lamp A will be off					
effect of opening the switch on each of	Lamp B will be off					
lamp A, B and C?	Lamp C will be off					
Switch Lamp A

What is used to show the actions of	Truth tables				
switches in a circuit?					
What is the name used for this	An AND circuit because switch A and				
arrangement of switches? Why?	switch B must be closed for the lamp to				
A B	light				
<u>+</u> -					
What is the name used for this	An OR circuit because switch A or switch				
arrangement of switches? Why?	B must be closed for the lamp to light				
A B B					
What is a fuse used for?	Protecting electrical appliances from				
	power surges.				
How does a fuse work?	If the current is too high, the wire inside				
	the fuse will melt and break. This breaks				
	the circuit.				
Which way should a diode (or LED) be	With the flat side of the triangle closest				
placed in a circuit so that it works?	to the positive side of the cell (or battery)				
	Green 9V				
Why must an LED be placed into a circuit	An LED has very low resistance in one				
the correct way around?	direction and very high resistance in the				
	other. This means that it will only work if				
	placed the correct way around.				
What are the energy transfers which take	Chemical → electrical → light				
place in a battery powered torch?					
What is a short circuit?	When electrons take the easiest route to				
	get back to the battery (e.g. if a piece of				
	wire is placed in parallel with the bulb)				

M/high 2 mastels alamanta con ha	1	1 1			1	l		
Which 3 metals elements can be	• Iron							
magnetised?	• Cobalt							
NA/hatiathatawa waadta daayika a wiga	Nickel		-	-				
What is the term used to describe a piece	A permanent magnet							
of metal which is always magnetic?				-				
What is the term used to describe a piece	A temporary magnet							
of metal has been magnetised due to								
being brought inside a magnetic field?								
What are the two ends of a magnet	North pole and south pole							
called?								
Is magnetism a contact or a non-contact	Non-contact because the magnet and the							
force?	other object do not need to be touching							
	for a force to act							
Why is magnetism a non-contact force?	Magnets have a magnetic field which							
	extends beyond the magnet itself							
Is the force between a magnet and	Attractive							
unmagnetized iron attractive for								
repulsive?								
Is the force between opposite poles on	Attractive							
different magnets attractive for								
repulsive?								
Is the force between like (the same) poles	Repulsive							
on different magnets attractive for	·							
repulsive?								
Which piece of equipment can be used to	A compass (or plotting compass)							
detect, and draw the shape of, a								
magnetic field?								
Why does a compass point north on	The Earth has a magnetic field							
Earth?								
Which part of the Erath does the north-	The magnetic south pole (geographical							
seeking end of a compass point to?	north pole)							
Which is the direction of the magnetic	North to south							
field lines around a bar magnet?	North to south							
Where is the magnetic field around a bar	It is strongest next to the poles.							
magnet strongest and how do you know	The magnetic field lines are closest							
this?	together at these points.							
tills:	together at these points.							
How can you show that putting a current	Use iron filings to observe the shape		+	+				
through a piece of wire induces (creates)	of the field							
a magnetic field?	Use plotting compasses							
What is the definition for a solenoid?	A coil of wire with a current flowing		-		+		-	+
virial is the definition for a solehold?								
What are 2 ways of increasing the	through it		+		1			
What are 3 ways of increasing the	Increasing the current							
strength of an electromagnet?	Increasing the number of coils							
M/horo is the strength of the second	Adding an iron core (such as a nail) In the control of the sail.							
Where is the strength of the magnetic	In the centre of the coil							
field in a solenoid strongest?								

What is the effect of reversing the	The direction of the magnetic field will				
current?	change				
Suggest 4 uses of electromagnets.	Electric bells				
	Picking up cars in a scrap-yard				
	Relay circuits				
	In magnetic door locks				

What word is used to describe the shape of the Sun, Earth and Moon?	(Approximately) spherical				
How long does it take for the Earth to spin on its axis?	24 hours (1 day)				
Why do we experience day and night?	As the Earth spins on its axis, part of the Earth will be facing the sun and part will be facing away from the sun				
Which direction does the Sun appear to move across the sky?	From East to West				
Why are shadows longer in the morning than at midday?	The Sun is lower in sky				
How long does it take for the moon to orbit the Earth?	28 days				
How long does it take for the Earth to orbit the Sun?	365.25 days (1 year)				
What is the name given to the shape of the path which the Earth takes around the Sun?	An elliptical orbit				
How many planets are there in our solar system?	8				
What are the names of these planets (in order from closest to the Sun)?	Mercury Venus Earth Mars Jupiter Saturn Uranus Neptune				
What is a moon?	A non-luminous, naturally occurring, satellite for a planet				
How do we see the moon?	Light from the Sun is reflected by the moon, and then down to the Earth				

Why do the northern and southern hemispheres experience different seasons?	 The Earth's axis is tilted This means that the northern hemisphere will be tilted either towards or away from the Sun When it is tilted towards the sun, the concentration of light rays hitting the Earth is higher This means that it is summer For the other half of the year, the northern hemisphere will be tilted away from the sun, meaning a lower concentration of light rays from the sun and hence colder weather 				
During summer, what do we know about the height of the sun and the length of shadows?	The Sun is higher in the sky Therefore, there are shorter shadows				
During what time of year are days longer in the northern hemisphere?	Summer				
When does a lunar eclipse take place?	When the Earth is between the moon and the Sun				
Why does a lunar eclipse take place?	Light from the Sun is blocked by the Earth (creating a shadow), meaning that no light can be reflected by the moon				
When does a solar eclipse take place?	When the moon is between the Earth and the Sun				
Why does a solar eclipse take place?	Light form the Sun is blocked by the moon (creating a shadow on the Earth)				
What is represented by the diagram below?	A solar eclipse				
What is represented by the diagram below?	A lunar eclipse				
Put these in order of size (smallest to largest): Star Planet Universe Solar system Moon Galaxy	Moon Planet Star Solar system Galaxy Universe				
What is a galaxy?	A collection of stars and planets				
Which galaxy is the Earth in? What is the nearest star to the Earth?	Milky Way Sun				

Why can we see stars?	They are luminous (give out their own light)				
Why can we see planets?	Light from the Sun is reflected by the planet				
What is the unit used to measure astronomical distances?	Light years				
What is a light year?	The distance travelled in one year by light (over 9 trillion km)				
Why do the planets orbit the Sun?	The Sun has a large gravitational field which attracts the planets				
Which objects will have a gravitational field?	Anything with mass				
Why can we not detect the gravitational field of an apple?	The mass is too smaller Larger mass = larger gravitational field strength				
What is the gravitational field strength on Earth?	10 N/kg				
Which planet will experience the largest gravitational force? Why?	Mercury because it is closest to the Sun				
Why do the planets not fall into the Sun?	They are moving sideways, and therefore constantly falling around the Sun				
Give 4 ways in which artificial satellites are used around the Earth?	 To study and predict weather patterns For navigation (and GPS) For communication For observation (spy and military satellites) 				
What is meant by the term 'geostationary orbit'?	A satellite which stays above the same geographical point on Earth (it takes the same amount of time to orbit the Earth as the Earth does to rotate on its axis).				
What is meant by the term 'high elliptical orbit'?	A satellite which moves closer to, and then further away from the Earth during its orbit				
What is meant by the term 'polar orbit'?	A satellite which orbits from the North pole to the South pole				
What is meant by the term 'low Earth orbit'	A satellite which orbits very close to the Earth and therefore has a short orbit time
